16-WEEK HYROX AUCKLAND PLAN

Beginner & Intermediate training tracks
built by the M2 coaching team

RACE TARGET

HYROX Auckland — 4-7 February

COACHED BY

Dave & Bekka, M2 Training Club

WELCOME TO YOUR PLAN

This is a 16-week road map to HYROX Auckland (4–7 February), built by the M2 coaching team around the eight HYROX stations and the running between them. It runs two tracks side by side, **Beginner** and **Intermediate**, so you can follow the one that matches where you're at right now and still train alongside teammates on the other track.

WHICH TRACK IS ME?

Beginner	New to HYROX or structured training. You can run/jog continuously for 20–30 minutes and have used a gym floor before, but haven't trained HYROX stations specifically.
Intermediate	You've either raced HYROX before or train consistently 3–4x/week already, and can run 5km comfortably without stopping.

HOW TO READ EACH WEEK

Each phase below shows a **template week** for both tracks. Repeat that structure for every week inside the phase, adding a small amount of load, pace or volume each week as you adapt, that's the progression, not a new plan every week. Specific numbers (reps, weights, times) are starting points: adjust up or down so the last 2 reps of every set feel genuinely hard but technically clean.

The 8 HYROX stations — SkiErg, Sled Push, Sled Pull, Burpee Broad Jumps, Rowing, Farmers Carry, Sandbag Lunges, Wall Balls — each separated by a 1km run. This plan trains all eight on rotation so nothing is a surprise on race day.

THE 16 WEEKS AT A GLANCE

WEEKS 1–6 FOUNDATION	WEEKS 7–11 BUILD	WEEKS 12–14 RACE-SPECIFIC PEAK	WEEKS 15–16 TAPER + RACE
--------------------------------	----------------------------	--	------------------------------------

Foundation builds your aerobic engine and station technique. Build adds load and pace. Peak rehearses the full race under real conditions. Taper drops volume so you arrive at HYROX Auckland fresh, not fatigued.

FOUNDATION

WEEKS 1–6

Goal: build your aerobic base and bulletproof technique on all 8 stations before adding real load or pace. Beginners: focus entirely on completing sessions with good form. Intermediate: same sessions, higher volume.

DAY	BEGINNER	INTERMEDIATE
MON	Full-body strength (machines/dumbbells), 3x10 each move, RPE 6–7	Full-body strength, 4x8 each move, RPE 7–8
TUE	20–30 min easy run or bike, conversational pace	30–40 min easy run, conversational pace
WED	Station technique: SkiErg + Sled Push, light load, focus on form (4 rounds)	Station technique: SkiErg + Sled Push, moderate load (5 rounds)
THU	Rest or gentle mobility / recovery swim	Easy 20 min bike or row, active recovery
FRI	Station technique: Rowing + Wall Balls, light load (4 rounds)	Station technique: Rowing + Wall Balls (5 rounds) + 1km run between
SAT	Long aerobic session: 30–40 min steady run/bike	Long aerobic session: 45–60 min steady run/bike
SUN	Full recovery day — sauna, ice bath, stretch at M2	Easy 20 min recovery jog + full recovery suite at M2

Progression through Weeks 1–6: add 5–10% more reps or 2–3kg load each fortnight; keep run pace conversational throughout Foundation.

BUILD**WEEKS 7–11**

Goal: increase load, pace and station-to-run transitions. This is where HYROX starts to feel like HYROX, moving straight from a station into a run with legs already tired.

DAY	BEGINNER	INTERMEDIATE
MON	Lower-body strength: squat, lunge, sled work, 4x8, RPE 7–8	Lower-body strength: heavier squat/lunge/sled, 4x6, RPE 8
TUE	Tempo run: 3x6 min at HYROX race pace, 2 min easy between	Tempo run: 4x8 min at HYROX race pace, 90 sec easy between
WED	Compromised running: 4x(400m run + 1 station), moderate load	Compromised running: 6x(400m run + 1 station), race load
THU	Upper-body strength + Farmers Carry / Sandbag Lunge technique	Upper-body strength (heavier) + Farmers Carry / Sandbag Lunge at race weight
FRI	Rest or mobility + recovery suite	Easy 20–30 min recovery bike or swim
SAT	Half-simulation: 4 runs + 4 stations at race intensity	Half-simulation: 6 runs + 6 stations at race intensity
SUN	Long aerobic: 40–50 min steady	Long aerobic: 60–75 min steady, alternate run/bike

Progression through Weeks 7–11: bring station loads up toward official HYROX race weights by Week 11; tempo runs should approach your realistic race pace.

RACE-SPECIFIC PEAK**WEEKS 12–14**

Goal: rehearse the actual race. Full or near-full simulations at race loads, so nothing on race day is unfamiliar.

DAY	BEGINNER	INTERMEDIATE
MON	Strength maintenance: 3x6 full-body, moderate load	Strength maintenance: 3x5 full-body, race-relevant load
TUE	Race-pace intervals: 5x1km at target race pace	Race-pace intervals: 6x1km at target race pace, race-weight vest optional
WED	Weakest-station focus: 6 rounds on your two hardest stations	Weakest-station focus: 8 rounds on your two hardest stations, race load
THU	Rest + recovery suite (ice bath, sauna, stretch)	Rest + recovery suite (ice bath, sauna, stretch)
FRI	Easy 20 min shake-out jog	Easy 20–30 min shake-out jog
SAT	HALF race simulation: 4x(1km run + station) at full race intensity	FULL race simulation: 8x(1km run + station) at full race intensity
SUN	Full rest and recovery	Full rest and recovery

Week 12: establish your race plan and pacing strategy. Week 13: repeat and target whatever broke down last time. Week 14: begin easing volume into the taper.

TAPER + RACE WEEK**WEEKS 15–16**

Goal: arrive at the start line fresh. Volume drops sharply, intensity stays sharp but brief. Trust the work you've already done.

DAY	BEGINNER	INTERMEDIATE
MON	Light full-body movement, 2x8 each, easy effort	Light full-body movement, 2x8 each, easy effort
TUE	Short run: 15–20 min easy, a few 20-second strides	Short run: 20 min easy, a few 20-second strides at race pace
WED	Rest + recovery suite	Rest + recovery suite
THU	Very short station touch: 2 rounds, light load, just to feel sharp	2 rounds station touch, light load, race-pace pickups
FRI	Complete rest, hydrate, prep race kit	Complete rest, hydrate, prep race kit
SAT/SUN	RACE WEEKEND — HYROX Auckland (4–7 Feb)	RACE WEEKEND — HYROX Auckland (4–7 Feb)
AFTER	Recovery week: easy movement only, full use of M2 recovery suite	Recovery week: easy movement only, full use of M2 recovery suite

NUTRITION & RECOVERY BASICS

Protein every meal	Aim for a palm-sized portion of protein at each meal to support the extra training load, especially on strength days.
Carbs around training	Eat more carbohydrate on your hardest training days (long runs, simulations) and less on rest days.
Hydration	Drink to thirst throughout the day; add electrolytes on long or hot sessions, Auckland summer heat adds up fast.
Sleep	7–9 hours is where most of your actual adaptation happens. Training breaks you down, sleep builds you back up.
Use the recovery suite	Ice bath, sauna and pool aren't optional extras, they're part of the training plan. Use them weekly, especially in Build and Peak.
Deload if needed	If you're feeling flat for more than 3 days, drop volume 30% for a few days rather than pushing through.

RACE DAY CHECKLIST

- Race kit laid out the night before: shoes, socks, singlet, race belt/number
- Light carb-based breakfast 2–3 hours before your start time
- Arrive with enough time to warm up properly, don't rush the start line
- Know your pacing plan for each run and your approach on your two weakest stations
- Water/electrolytes on course as provided, don't try anything new on race day
- After the race: easy walk, refuel, and get into the M2 recovery suite that week

TRAIN IT WITH US

This plan gets you race-ready on your own. If you want it coached, M2 runs the sessions that make this plan come alive:

HYROX Threshold & Engine classes	Coached group sessions built around the same aerobic and race-pace work in this plan, every week at M2.
Free HYROX Saturday class	Open to members and non-members, from late October. A no-pressure way to try the stations in person.
Sunday HYROX workshops	Monthly deep-dive sessions with Dave and/or Bekka on technique, pacing and race strategy.
1:1 & small-group coaching with Dave or Bekka	For a fully personalised version of this plan, tailored to your schedule, weaknesses and race-day goals, book a session directly with Dave or Bekka.
